Backup as a Service

With rise of ransomware, your organization must have a plan to protect valuable business information. Getting backups offsite can be challenging due to limited bandwidth, growing data volumes, and a lack of resources required to build or maintain a true offsite backup repository.

A proper backup strategy follows the 3-2-1 rule. This states that you need to keep three copies of your data, stored on two types of media, with one copy being offsite. With Trace3’s managed Backup as a Service (BaaS), you can master the 3-2-1 rule without investing money and resources into a second site or adding unneeded bandwidth. Just leverage our backup repository services and take advantage of enterprise grade technology, while paying for it like a utility.

Make backups easier and safer

Organizations of any size can easily comply with the first two elements of the 3-2-1 rule. Finding an offsite backup however, can be a daunting process. As public and private cloud usage expands, virtual machines are becoming more common, and companies are struggling to find reliable backup solutions for their cloud environments.

Data Strategy’s BaaS can help improve your disaster recovery process without the addition of any new hardware. Our battle-tested solution helps maintain mission-critical applications and data without the cost and complexity associated with traditional in-house disaster recovery systems.

Our team does all the work, including software and component setup, and we manage the backups to ensure they work. You can expect top-notch security compliance and exceptional stewardship of your data from endpoint-to-endpoint. And, if needed, WAN acceleration modules are available to speed up the backup process.

Benefits of managed backup

- Reduced network complexity
- Fully secured and encrypted
- Always available 24/7
- Top-notch compliance
- Complete control
- Predictable pricing
- Insider protection (air gap copy of the data as iLand only accessible by iLand support)

Take the next steps

Cost-effectively meet your security, disaster recovery, and business continuity needs with Backup as a Service from Trace3. Call us at 877.264.2363 or email gems@trace3.com.

BACKUP AS A SERVICE ENSURES YOUR DATA IS RECOVERABLE, NO MATTER WHAT

And it’s as easy as 1-2-3:

1. Install the software.
2. Choose your geographic location and regional data center.
3. Replicate and run virtual machines at-will.
