Infrastructure monitoring is essential for companies of all sizes to ensure that network systems are performing properly. Engaging a partner to perform those services can help your overall operational workflow by providing 24x7x365 visibility without having to hire a full-time on-site IT support engineer.

Trace3’s Monitoring as a Service (MaaS) can save your business significant time and money by monitoring, identifying, and reporting on issues before they become larger problems. Whether we’re monitoring your on-premise, cloud, third-party, or hybrid environment, we focus on your infrastructure so you can focus on your business.

Your network is completely visible
You need to know everything about your growing, changing network infrastructure. Our alerting systems and regular reports can help you identify patterns and trends in system performance, as well as demonstrate the need for upgrades or replacements.

Increase uptime and performance
When business critical systems fail, you can lose orders, productivity, customers and brand reputation. Dashboards, forecasting, and customizable reporting help protect critical systems and business data. This rapid relay of infrastructure performance means you are always informed of network problems, can instantly take corrective action, and minimize potential downtime.

Scale your team with your network
Exceeding system capacity or thresholds can leave your IT team scrambling. Third-party monitoring can help you identify specific areas of your infrastructure that are experiencing problems before reaching limitations giving you more time to properly plan to scale. Your team will be ready for anything, from resolving a breach, a server failure, or a storage unit at capacity. With Trace3 Monitoring as a Service, your IT staff can focus on innovation instead of maintenance.

Take the next step
Schedule an assessment of your environment to learn more about how Trace3 can help you better monitor your environment. Contact us at 877.264.2363 or gems@trace3.com.

REASONS TO USE TRACE3
24x7x365 US-based team.
No hardware to buy, software to build, or platforms to maintain. We do it all.
Secure, flexible, scalable.
More than 100 engineers available to remediate issues.

ASSESS YOUR CURRENT SITUATION
How much time is spent on monitoring systems?
Does your monitoring solution provide what you need? Is it easy to use? Is it proactive?
Have you experienced any downtime or outages that could have been prevented with infrastructure monitoring?
