

# Security Overview

Threat vectors and business risks continue to evolve creating a constantly changing cybersecurity landscape. Trace3 Security helps you develop a security posture to protect your enterprise today and prepare for the threats of tomorrow.

As businesses embrace digital transformation, entirely new cyber security risks emerge. Trace3 Security identifies and addresses risks early, deploys IT resources efficiently, and protects environments and data prudently. Trace3 Security provides an experienced consultancy team to collaborate and create a partnership extending beyond the task at hand. Trace3 Security Consultants provide your business with unique insights to help you avoid problems before they occur and transform your business from a reactive to a proactive organization.

## SECURITY STRATEGY

Assess and improve your security program by establishing benchmarks, measuring efficacy, identifying investment opportunities, and develop policies and standards to advance your security capabilities. Elevate your program by aligning with industry standards and strategically maturing core elements.

## IDENTITY AND ACCESS MANAGEMENT

Innovative next-generation IAM solutions securely enable an advanced digital business environment lowering operating cost, increasing efficiency, accelerating performance, and improving security.

## ENDPOINT AND DATA SECURITY

Improve technologies and internal program elements to confidently protect your data, websites, applications, and web services properties from internal and external threats. Implement purpose-built solutions to protect devices and data from threats to privacy and the risk of unauthorized access to proprietary and confidential information.

## CLOUD SECURITY

Develop and implement a layered security strategy across identity, data, network, and hosts in order to increase visibility and enable threat detection and prevention, as well as enable rapid response.

## OFFENSIVE SECURITY

Move beyond traditional penetration testing and strategies leveraging an innovative approach to compromise security to ensure systems, devices, and users are secure and safe from threats and attacks.

## SECURITY OPERATIONS

Identify internal and external security risks and implement orchestrated tools and data processing technologies to monitor, assess, and defend against attacks.

## SECURITY AUTOMATION

Enable scale, reduce IT efforts and keep pace with the speed of business leveraging strategy, architecture, implementation, consulting, and managed services focused on automation, analytics, augmented decisioning, and artificial intelligence.

## INFRASTRUCTURE SECURITY

Protect devices and data utilizing emerging and innovative technology from threats to privacy and the risk of unauthorized access to proprietary and confidential information.
