

Endpoint and Data Security

IT and business leaders rely on the value of data more than ever to support growth, enable efficiency, and drive competitive advantage. Due to the explosive growth in cloud as well as mobility, the endpoint has become the network perimeter increasing the risk of bad actors locating, accessing, and stealing high value data assets. Implementing an endpoint strategy to protect and secure data is critical.

Protecting and securing confidentiality, integrity, and availability of the endpoint is a business requirement. A well-orchestrated endpoint and data strategy will help safeguard your business from internal and external threats. Trace3 Security has a plan to guide your organization to gain an improved understanding of protecting and managing endpoints to support business growth and limit risk.

PRODUCT SELECTION SUPPORT

Leverage strategic guidance for use case and requirements development, short listing solutions aligned to business requirements, and proof of concept assistance to select the best possible technology for your environment and organization.

LAYERS OF PROTECTION ANALYSIS

Identify if existing security solutions in your environment offers protection against a specific attack technique and if security solutions are being utilized optimally. A comprehensive review of the layers of protection will identify gaps and redundant capabilities to help your business improve overall security.

IMPLEMENTATION SUPPORT

Overcome staffing and training issues within your organization due to a lack of time and resources. Speed up time to market for goods and services by leveraging implementation assistance, reference architectures, and as-built documentation to ensure projects are deployed as planned.

INTEGRATION AND AUTOMATION

Integrate multiple security products and automate workflows to manage the increasing volume and velocity of security events to improve your speed to response times. A vendor neutral approach to playbook development and implementation ensures technology and tools are aligned to your environment and business objectives.

KEY AND CERTIFICATE MANAGEMENT

Build a governance program with technical capabilities to manage Keys and Certificates to get the most value out of your security investments. A trustworthy foundation of Keys and Certificates drives efficiency across the business and requires proper management to remain secure and private.

OPERATIONS SUPPORT

Extend the reach and capabilities of your team with architecture reviews, health checks, roadmap planning, and compromise assessments to strengthen the effectiveness of the services empowering your business.

Trace3 Security has a plan to help your organization implement effective programs and technical controls to grow faster, minimize costs, and operate your business efficiently and securely.
